

Salyt® Energeticum

Energy booster for calves. ...because scouring calves need more energy

Almost a third of all calves at the age of up to 2 weeks suffer from neonate scours.

The calves do not have a mature immune system and their energy and nutrient resources are low. The body loses lots of fluid, energy, electrolytes and as a result of the loss of buffer substances an acidosis develops.

A timely intervention with Salyt® for calves can distinctly alleviate the course of the disease. The maintenance of the milk feed and the administration of Salyt® for calves are the most important elements in scours therapy.

Inulin (so called prebiotic) optimizes digestion and helps to reduce harmful germs such as coli bacteria and salmonella.

- No stressful change of drink
- Additional energy
- Ready to use
- Easy dosage
- With prebiotics

Sales unit: 1000 ml bottle
Product code: SA00044

Sales unit: 4 x 50 ml bottlestrips
Product code: SA00045

Sales unit: 5 l canister
Product code: SA00047

Sales unit: 10 l canister
Product code: SA00048
